Adverse Effects of Vaccines Institute of Medicine, Board on Population Health and Public Health Practice, Committee to Review Adverse Effects of Vaccines, 2012-04-26 In 1900, for every 1,000 babies born in the United States, 100 would die before their first birthday, often due to infectious diseases. Today, vaccines exist for many viral and bacterial diseases. The National Childhood Vaccine Injury Act, passed in 1986, was intended to bolster vaccine research and development through the federal coordination of vaccine initiatives and to provide relief to vaccine manufacturers facing financial burdens. The legislation also intended to address concerns about the safety of vaccines by instituting a compensation program, setting up a passive surveillance system for vaccine adverse events, and by providing information to consumers. A key component of the legislation required the U.S. Department of Health and Human Services to collaborate with the Institute of Medicine to assess concerns about the safety of vaccines and potential adverse events, especially in children. *Adverse Effects of Vaccines* reviews the epidemiological, clinical, and biological evidence regarding adverse health events associated with specific vaccines covered by the National Vaccine Injury Compensation Program (VICP), including the varicella zoster vaccine, influenza vaccines, the hepatitis B vaccine, and the human papillomavirus vaccine, among others. For each possible adverse event, the report reviews peer-reviewed primary studies, summarizes their findings, and evaluates the epidemiological, clinical, and biological evidence. It finds that while no vaccine is 100 percent safe, very few adverse events are shown to be caused by vaccines. In addition, the evidence shows that vaccines do not cause several conditions. For example, the MMR vaccine is not associated with autism or childhood diabetes. Also, the DTaP vaccine is not associated with diabetes and the influenza vaccine given as a shot does not exacerbate asthma. *Adverse Effects of Vaccines* will be of special interest to the National Vaccine Program Office, the VICP, the Centers for Disease Control and Prevention, vaccine safety researchers and manufacturers, parents, caregivers, and health professionals in the private and public sectors.

The Secret of Our Success Joseph Henrich, 2017-10-17 How our collective intelligence has helped us to evolve and prosper Humans are a puzzling species. On the one hand, we struggle to survive on our own in the wild, often failing to overcome even basic challenges, like obtaining food, building shelters, or avoiding predators. On the other hand, human groups have produced ingenious technologies, sophisticated languages, and complex institutions that have permitted us to successfully expand into a vast range of diverse environments. What has enabled us to dominate the globe, more than any

other species, while remaining virtually helpless as lone individuals? This book shows that the secret of our success lies not in our innate intelligence, but in our collective brains—on the ability of human groups to socially interconnect and learn from one another over generations. Drawing insights from lost European explorers, clever chimpanzees, mobile hunter-gatherers, neuroscientific findings, ancient bones, and the human genome, Joseph Henrich demonstrates how our collective brains have propelled our species' genetic evolution and shaped our biology. Our early capacities for learning from others produced many cultural innovations, such as fire, cooking, water containers, plant knowledge, and projectile weapons, which in turn drove the expansion of our brains and altered our physiology, anatomy, and psychology in crucial ways. Later on, some collective brains generated and recombined powerful concepts, such as the lever, wheel, screw, and writing, while also creating the institutions that continue to alter our motivations and perceptions. Henrich shows how our genetics and biology are inextricably interwoven with cultural evolution, and how culture-gene interactions launched our species on an extraordinary evolutionary trajectory. Tracking clues from our ancient past to the present, *The Secret of Our Success* explores how the evolution of both our cultural and social natures produce a collective intelligence that explains both our species' immense success and the origins of human uniqueness.

Mind and Nature Gregory Bateson, 2002 A re-issue of Gregory Bateson's classic work. It summarizes Bateson's thinking on the subject of the patterns that connect living beings to each other and to their environment.

Pattern Recognition and Machine Learning Christopher M. Bishop, 2016-08-23 This is the first textbook on pattern recognition to present the Bayesian viewpoint. The book presents approximate inference algorithms that permit fast approximate answers in situations where exact answers are not feasible. It uses graphical models to describe probability distributions when no other books apply graphical models to machine learning. No previous knowledge of pattern recognition

or machine learning concepts is assumed. Familiarity with multivariate calculus and basic linear algebra is required, and some experience in the use of probabilities would be helpful though not essential as the book includes a self-contained introduction to basic probability theory.

Wolf, Xiongwu Wu, Yi Xue, Darrin M. York, Shiji Zhao, Peter A. Kollman, 2021-06-13 Amber is the collective name for a suite of programs that allow users to carry out molecular dynamics simulations, particularly on biomolecules. None of the individual programs carries this name, but the various parts work reasonably well together, and provide a powerful framework for many common calculations. The term Amber is also used to refer to the empirical force fields that are implemented here. It should be recognized, however, that the code and force field are separate: several other computer packages have implemented the Amber force fields, and other force fields can be implemented with the Amber programs. Further, the force fields are in the public domain, whereas the codes are distributed under a license agreement. The Amber software suite is divided into two parts: AmberTools21, a collection of freely available programs mostly under the GPL license, and Amber20, which is centered around the pmemd simulation program, and which continues to be licensed as before, under a more restrictive license. Amber20 represents a significant change from the most recent previous version, Amber18. (We have moved to numbering Amber releases by the last two digits of the calendar year, so there are no odd-numbered versions.) Please see <https://ambermd.org> for an overview of the most important changes. AmberTools is a set of programs for biomolecular simulation and analysis. They are designed to work well with each other, and with the “regular” Amber suite of programs. You can perform many simulation tasks with AmberTools, and you can do more extensive simulations with the combination of AmberTools and Amber itself. Most components of AmberTools are released under the GNU General Public License (GPL). A few components are in the public domain or have other open-source licenses. See the README file for more information.

Handbook of Cognition and Emotion Michael D. Robinson, Edward R. Watkins, Eddie Harmon-Jones, 2013-04-03 Comprehensively examining the relationship between cognition and emotion, this authoritative handbook brings together leading investigators from multiple psychological subdisciplines. Biological underpinnings of the cognition-emotion interface are reviewed, including the role of neurotransmitters and hormones. Contributors explore how key cognitive processes--such as attention, learning, and memory--shape emotional phenomena, and vice versa. Individual differences in areas where cognition and emotion interact--such as agreeableness and emotional intelligence--are addressed. The volume also analyzes the roles of cognition and emotion in anxiety, depression, borderline personality disorder, and other psychological disorders.

American Army Doctrine for the Post-Cold War John L. Romjue, 1998-12 Between 1991 and 1993, the Army formulated a fighting doctrine recast to fit the power demands of a new strategic world. This new power-order replaced the Army's earlier AirLand Battle doctrine, first issued in 1982. This monograph addresses several questions revolving around the rapid replacement, less than 2 years after its success in the desert war, of a recognized and successful fighting doctrine. Discusses the roots of U.S. Army doctrine and the antecedent developments leading to the Army's recasting of its key battle doctrine. Examines the mechanism of the process of change, the effects of the new doctrine and how it was implemented.

Free Energy Calculations Christophe Chipot, Andrew Pohorille, 2007-01-08 Free energy constitutes the most important thermodynamic quantity to understand how chemical species recognize each other, associate or react. Examples of problems in which knowledge of the underlying free energy behaviour is required, include conformational equilibria and molecular association, partitioning between immiscible liquids, receptor-drug interaction, protein-protein and protein-DNA association, and protein stability. This volume sets out to present a coherent and comprehensive account of the concepts that underlie different approaches devised for the determination of free energies. The reader will gain the necessary insight into the

theoretical and computational foundations of the subject and will be presented with relevant applications from molecular-level modelling and simulations of chemical and biological systems. Both formally accurate and approximate methods are covered using both classical and quantum mechanical descriptions. A central theme of the book is that the wide variety of free energy calculation techniques available today can be understood as different implementations of a few basic principles. The book is aimed at a broad readership of graduate students and researchers having a background in chemistry, physics, engineering and physical biology.

Root Causes of Terrorism Tore Bjørge, 2004-08-02 This team of international experts analyses the possibilities and limitations of preventing or reducing terrorism by addressing the factors that give rise to it and sustain it. The key questions raised include: * what are the main circumstances that provide preconditions for the emergence of various types of terrorism? * what are the typical precipitants that trigger terrorist campaigns? * to what extent is it possible to reduce the problem of terrorism by influencing these causes and circumstances? * should we address those factors that sustain terrorist campaigns rather than root causes? This book is edited by Tore Bjørge - Senior Research Fellow at the Norwegian Institute of International Affairs (NUPI), Professor and Research Director at the Norwegian Police University College.

Technological Slavery (Large Print 16pt) Theodore J. Kaczynski, David Skrbina, 2011-02 Theodore Kaczynski saw violent collapse as the only way to bring down the techno-industrial system, and in more than a decade of mail bomb terror he killed three people and injured 23 others. One does not need to support the actions that landed Kaczynski in supermax prison to see the value of his essays disabusing the notion of heroic technology while revealing the manner in which it is destroying the planet. For the first time, readers will have an uncensored personal account of his anti-technology philosophy, including a corrected version of the notorious "Unabomber Manifesto," Kaczynski's critique of anarcho-primitivism, and essays regarding "the Coming Revolution."

Cognition and Emotion Eric Eich Professor of Psychology University of British Columbia, Berkeley John F. Kihlstrom Professor of Psychology University of California, Stanford CA Gordon H. Bower Albert Ray Lang Professor of Psychology Stanford University, Joseph P. Forgas Scientia Professor of Psychology University of New South Wales, Paula M. Niedenthal Scientia Professor of Psychology University of New South Wales, 2000-07-28 Recent years have witnessed a revival of research in the interplay between cognition and emotion. The reasons for this renaissance are many and varied. In the first place, emotion theorists have come to recognize the pivotal role of cognitive factors in virtually all aspects of the emotion process, and to rely on basic cognitive factors and insight in creating new models of affective space. Also, the successful application of cognitive therapies to affective disorders has prompted clinical psychologists to work towards a clearer understanding of the connections between cognitive processes and emotional problems. And whereas the cognitive revolutionaries of the 1960s regarded emotions with suspicion, viewing them as nagging sources of hot noise in an otherwise

cool, rational, and computer-like system of information processing, cognitive researchers of the 1990s regard emotions with respect, owing to their potent and predictable effects on tasks as diverse as object perception, episodic recall, and risk assessment. These intersecting lines of interest have made cognition and emotion one of the most active and rapidly developing areas within psychological science. Written in debate format, this book covers developing fields such as social cognition, as well as classic areas such as memory, learning, perception and categorization. The links between emotion and memory, learning, perception, categorization, social judgements, and behavior are addressed. Contributors come from the U.S., Canada, Australia, and France.
